

Managers need a customer view, not a transaction log

Who should I focus on? **Why** them?

What opportunity exists?

Where are they?

How large is it?

Five questions a relationship manager must answer with limited time. The Customer 360 makes each one answerable on a single screen.

Public data, documented rules, every row accounted for

Rejected: 59,620 rows, all logged with a reason (sparse tail after 15 Sep; zero amounts).

Quality: 17 checks pass, 1 documented exception (placeholder birth dates), 6 profiling findings.

Identity: only 0.9% of repeat CustomerIDs keep consistent demographics, so repeat behaviour is weak evidence.

A young, metro-heavy base where the top 10% of customers drive 63% of value

So what: effort pays off unevenly. Protect the top decile with named coverage, and do not judge customers on frequency alone.

Engaged Repeat Users: 15% of customers, 28% of value; a 35% tail adds 4%

Signals are prioritised, not guaranteed: each segment gets a short list of conversations

Segment	Investment / MF	Premium account	Credit card	Insurance	Personal loan*	Re-engagement
Engaged Repeat Users	32%	11%	53%	29%	11%	0%
Recent One-Time Spenders	21%	14%	35%	32%	12%	0%
Lapsed One-Time Spenders	21%	14%	35%	31%	0%	33%
Low-Ticket Occasional	0%	5%	0%	14%	0%	8%
Near-Zero Balance	0%	0%	0%	0%	16%	0%

Share of each segment carrying each signal. *Personal loan = demand signal only; no credit judgement.

What we found, why it matters, what to do

Value is concentrated

Top 10% of customers → 63% of value

→ **Named RM coverage for the top decile**

Engaged Repeat Users punch above weight

15% of customers, 28% of value

→ **Deepen: needs review, cards, investments**

A third of value is going quiet

Lapsed One-Time Spenders: 34% of value, not seen 2+ weeks

→ **Re-engagement call before any sale**

The tail is cheap to serve, not to call

35% of customers, 4.4% of value

→ **Digital nurture; activation checks**

Behaviour beats demographics

Gender and age explain little ($V = 0.07$, $\epsilon^2 = 0.06$)

→ **Target on behaviour, never on gender**

Limits

Public 2016 data, 46-day window, no product holdings or revenue. Signals rank conversations; they are not eligibility decisions.

Pilot with Tier A, measure response, refine the rules

Segment	Action	Owner	Timing	Success metric
Engaged Repeat Users	Deepen the relationship: RM introduction call, needs review, bundle offer	Relationship Manager	Within 2 weeks	Products discussed per contact; repeat activity next 30 days
Recent One-Time Spenders	Convert to repeat use: welcome-back nudge and digital activation while the visit is recent	Branch / Digital team	Within 7 days of the transaction	Second transaction within 30 days
Lapsed One-Time Spenders	Win-back: service call or message to understand needs; offer relevant product review	Relationship Manager / Contact centre	This month	Share re-activated within 30 days
Low-Ticket Occasional	Low-cost digital nurture only; no RM time	Digital marketing	Automated	Digital engagement rate; cost per contact
Near-Zero Balance	Service check and activation; exclude from cross-sell lists	Branch operations	Quarterly review	Share with balance above Rs 1,000 next quarter

Weeks 1-4: call Tier A (top 5%), log outcomes

Week 5: compare response by segment and theme

Then: tighten card / insurance rules, learn weights from outcomes
